SUMMARY

B.Sc. (Digital Innovation), **First Class Honors**, Rangsit University — **GPA 3.79**, conferred May 2026. Joining Snoopbees as an IT Security Engineer (Pentester). Focused on web application security, cloud/DevOps, and Python backend development. Author of a deep reinforcement learning (D3QN) web vulnerability scanner accepted at **InCIT 2026**. **AWS Certified Cloud Practitioner**. Multilingual, with two years of workplace experience in Japan.

SKILLS

Security: Web App Security (SQLi, XSS), Vulnerability Assessment, Network Security, Linux Hardening, Nmap

Cloud & DevOps: AWS (CLF-C02), Docker, CI/CD, Linux Administration, Bash, Git

Programming & AI: Python, Deep Reinforcement Learning, REST APIs, SQL, Next.js

Languages: Myanmar (Native), English (B2), Japanese (conversational, JLPT N4), Thai, Chinese

PROJECTS & RESEARCH

DRL Web Vulnerability Scanner (D3QN)

Co-authored with faculty advisor · Accepted at InCIT 2026, Nov 12–14, Bangkok

- Designed and trained a Double Dueling Deep Q-Network agent to autonomously discover SQL injection and XSS vulnerabilities in a custom Gymnasium environment ("Web-Security-Gym").
- Modeled the penetration-testing workflow as a Markov Decision Process with phase-based learning (reconnaissance → exploitation).
- Benchmarked detection performance across vulnerability classes and documented where the approach generalises and where it does not.
- Code: github.com/mine969/DRL-Agent-vul

Technical Education Platforms — 4 Static Web Apps

Independent Projects · deployed on GitHub Pages

- Engineered four offline-capable static learning platforms — a security-training site, an IT certification study library, a JLPT N5–N1 Japanese LMS, and a beginner digital-literacy course — each compiling a large Markdown corpus into a single deployable application.
- Built the shared delivery layer: full-text client-side search, progress tracking in browser storage, and a zero-backend build so each site runs entirely offline where connectivity is unreliable.
- Code: github.com/mine969

Burger POS & Delivery System

Independent Project

- Designed and built a point-of-sale and online ordering backend hosted on AWS Cloud, with clear system boundaries between ordering, kitchen, and delivery stages.
- Code: github.com/mine969/A-Burgar-POS-delivery-system

Secure Portfolio Platform

mine969.github.io · Next.js · EN / TH / JP / MY

- Built and maintain a static Next.js portfolio deployed via GitHub Pages, with CI/CD checks for deployment stability and accessibility standards.
- Code: github.com/mine969/mine969.github.io

EXPERIENCE

IT Security Engineer (Pentester) — Snoopbees Co., Ltd.

Incoming 2026

Bangkok, Thailand · Offer accepted August 2026 · Start pending work-permit processing

Marketing LINE OA Intern — Thonburi Bamrungmuang International Hospital (Internal Automation & Dashboard Build)

2025

Bangkok, Thailand · Internship (300 hours)

- Built an internal dashboard and monitoring system for LINE OA operations, replacing an untracked manual process with centralized status tracking.
- Automated a manual message-scheduling process, eliminating a recurring operational bottleneck.
- Documented the system end-to-end — architecture diagrams, workflows, and flowcharts — so non-technical staff could operate and maintain it without engineering support.

Social Firm Staff (Part-time) — Tokyo Soteria (NPO)

Feb 2021 – May 2023

Tokyo, Japan · Japanese-language workplace · Weekdays 9:00 AM – 5:00 PM

- Contributed to a social-enterprise food operation — baking and salad/bento preparation, with counter service — alongside staff and members with disabilities.
- Worked daily in Japanese across a mixed Myanmar-, Japanese-, and English-speaking team and customer base, in a workplace where Japanese was the only working language.

Data Entry — Picturesque Myanmar Tourism

2018 – 2021

Myanmar · Full-time

- Maintained booking and customer records for a tourism operator's daily administrative workflow, keeping records accurate across a high-volume manual entry process.

EDUCATION

B.Sc. (Digital Innovation) — Rangsit University, Thailand

Aug 2023 – May 2026

First Class Honors · GPA 3.79 · 126 credits earned · Degree conferred 14 May 2026

Relevant coursework: Information System Security · Linux for Cyber Security · Data Communication & Networks · Container Development · API Design & Development · Computational Artificial Intelligence

Pearson HND IT Diploma — Gusto International College

2016 – 2018

CERTIFICATIONS & TRAINING

- **AWS Certified Cloud Practitioner (CLF-C02)** — Coursera
- **EnglishScore Core Skills (CEFR B2)** — British Council, Verified
- **Cyber Security 101** — TryHackMe
- **Training:** Cybersecurity Fundamentals, Linux Administration, Nmap Network Scanning, Bash Scripting, Intro to Cloud Computing (Codecademy)

LEADERSHIP & COMMUNITY

RSUnival DIT Thingyan Festival Organizer — Rangsit University

Apr 2026

- Coordinated student volunteers, logistics, scheduling, and on-site operations across multiple activity teams for a university-wide festival.

RSU Thingyan Festival Organizer — Rangsit University

Apr 2024

- Returning organizer across consecutive years, managing volunteers, activity teams, and event flow for a large student audience.
